Resource types and health checks in Azure resource health

Article • 09/11/2024

Below is a complete list of all the checks executed through resource health by resource types.

Microsoft.AnalysisServices/servers

Expand table

Executed Checks
- Is the server up and running? - Has the server run out of memory? - Is the server starting up? - Is the server recovering?

Microsoft.ApiManagement/service

Expand table

Executed Checks
- Is the Api Management service up and running?

Microsoft.AppPlatform/Spring

Expand table

Executed Checks
- Is the Azure Spring Cloud instance available?

Microsoft.Batch/batchAccounts

Expand table

Executed Checks
- Is the Batch account up and running? - Has the pool quota been exceeded for this batch account?

Microsoft.Cache/Redis

Expand table

Executed Checks
- Are all the Cache nodes up and running? - Can the Cache be reached from within the datacenter? - Has the Cache reached the maximum number of connections? - Has the cache exhausted its available memory? - Is the Cache experiencing a high number of page faults? - Is the Cache under heavy load?

Microsoft.CDN/profile

Expand table

Executed Checks
- Is the supplemental portal accessible for CDN configuration operations? - Are there ongoing delivery issues with the CDN endpoints? - Can users change the configuration of their CDN resources? - Are configuration changes propagating at the expected rate? - Can users manage the CDN configuration using the Azure portal, PowerShell, or the API?

Microsoft.classiccompute/virtualmachines

Expand table

Executed Checks
- Is the server hosting this virtual machine up and running? - Is the virtual machine container provisioned and powered up? - Is there network connectivity between the host and the storage account? - Is there ongoing planned maintenance? - Are there heartbeats between Guest and host agent *(if Guest extension is installed)*?

Microsoft.classiccompute/domainnames

Expand table

Executed Checks
- Is production slot deployment healthy across all role instances? - Is the role healthy across all its VM instances? - What is the health status of each VM within a role of a cloud service? - Was the VM status change due to platform or customer initiated operation? - Has the booting of the guest OS completed? - Is there ongoing planned maintenance? - Is the host hardware degraded and predicted to fail soon? - Learn More about Executed Checks

Microsoft.cognitiveservices/accounts

Expand table

Executed Checks
- Can the account be reached from within the datacenter? - Is the Azure AI services resource provider available? - Is the Cognitive Service available in the appropriate region? - Can read operations be performed on the storage account holding the resource metadata? - Has the API call quota been reached? - Has the API call read-limit been reached?

Microsoft.compute/hostgroups/hosts

Expand table

Executed Checks
- Is the host up and running? - Is the host hardware degraded? - Is the host deallocated? - Has the host hardware service healed to different hardware?

Microsoft.compute/virtualmachines

Expand table

Executed Checks
- Is the server hosting this virtual machine up and running? - Is the virtual machine container provisioned and powered up? - Is there network connectivity between the host and the storage account? - Is there ongoing planned maintenance? - Are there heartbeats between Guest and host agent *(if Guest extension is installed)*?

Microsoft.compute/virtualmachinescalesets

Expand table

Executed Checks
- Is the server hosting this virtual machine up and running? - Is the virtual machine container provisioned and powered up? - Is there network connectivity between the host and the storage account? - Is there ongoing planned maintenance? - Are there heartbeats between Guest and host agent *(if Guest extension is installed)*?

Microsoft.ContainerService/managedClusters

Expand table

Executed Checks
- Is the cluster up and running? - Are core services available on the cluster? - Are all cluster nodes ready? - Is the service principal current and valid?

Microsoft.datafactory/factories

Expand table

Executed Checks
- Have there been pipeline run failures? - Is the cluster hosting the Data Factory healthy?

Microsoft.datalakeanalytics/accounts

Expand table

Executed Checks
- Have users experienced problems submitting or listing their Data Lake Analytics jobs? - Are Data Lake Analytics jobs unable to complete due to system errors?

Microsoft.datalakestore/accounts

Expand table

Executed Checks
- Have users experienced problems uploading data to Data Lake Store? - Have users experienced problems downloading data from Data Lake Store?

Microsoft.datamigration/services

Expand table

Executed Checks
- Has the database migration service failed to provision? - Has the database migration service stopped due to inactivity or user request?

Microsoft.DataShare/accounts

Expand table

Executed Checks
- Is the Data Share account up and running? - Is the cluster hosting the Data Share available?

Microsoft.DBforMariaDB/servers

Expand table

Executed Checks
- Is the server unavailable due to maintenance? - Is the server unavailable due to reconfiguration?

Microsoft.DBforMySQL/servers

Expand table

Executed Checks
- Is the server unavailable due to maintenance? - Is the server unavailable due to reconfiguration?

Microsoft.DBforPostgreSQL/servers

Expand table

Executed Checks
- Is the server unavailable due to maintenance? - Is the server unavailable due to reconfiguration?

Microsoft.devices/iothubs

Expand table

Executed Checks
- Is the IoT hub up and running?

Microsoft.DigitalTwins/DigitalTwinsInstances

Expand table

Executed Checks
- Is the Azure Digital Twins instance up and running?

Microsoft.documentdb/databaseAccounts

Expand table

Executed Checks
- Have there been any database or collection requests not served due to an Azure Cosmos DB service unavailability? - Have there been any document requests not served due to an Azure Cosmos DB service unavailability?

Microsoft.eventhub/namespaces

Expand table

Executed Checks
- Is the Event Hubs namespace experiencing user generated errors? - Is the Event Hubs namespace currently being upgraded?

Microsoft.hdinsight/clusters

Expand table

Executed Checks
- Are core services available on the HDInsight cluster? - Can the HDInsight cluster access the key for BYOK encryption at rest?

Microsoft.HealthcareApis/workspaces/dicomservices

Expand table

Executed Checks
- Is the DICOM service up and running? - Can the DICOM service access the customer-managed encryption key? - Can the DICOM service access the connected data lake?

Microsoft.HybridCompute/machines

Expand table

Executed Checks
- Is the agent on your server connected to Azure and sending heartbeats?

Microsoft.IoTCentral/IoTApps

Expand table

Executed Checks
- Is the IoT Central Application available?

Microsoft.Insights/scheduledQueryRules

Expand table

Executed Checks
- Is this log search alert rule currently disabled? - Does this rule runs less frequently than every 15 minutes? - Is there a semantic, syntax, or validation error in the query? - Is the response size is too large? - Is the query consuming too many resources? - Can the target Log Analytics/Application Insights workspace for this alert rule be found? - Is the alert rule query failing because of throttling (Error 429)? - Does the query have the correct permissions? - Are there NSP validations issues for the query? - Does the query evaluation fail due to exceeding the limit of fired (non- resolved) alerts per day? - Did the alert evaluation fail due to exceeding the allowed limit of dimension combinations values that meet the threshold?

Microsoft.KeyVault/vaults

Expand table

Executed Checks
- Are requests to key vault failing due to Azure KeyVault platform issues? - Are requests to key vault being throttled due to too many requests made by customer?

Microsoft.Kusto/clusters

Expand table

Executed Checks
- Is the cluster experiencing low ingestion success rates? - Is the cluster experiencing high ingestion latency?

Executed Checks
- Is the cluster experiencing a high number of query failures?

Microsoft.MachineLearning/webServices

Expand table

Executed Checks
- Is the web service up and running?

Microsoft.Media/mediaservices

Expand table

Executed Checks
- Is the media service up and running?

Microsoft.network/applicationgateways

Expand table

Executed Checks
- Is performance of the Application Gateway degraded? - Is the Application Gateway available?

Microsoft.network/azureFirewalls

Expand table

Executed Checks
- Are there enough remaining available ports to perform Source NAT? - Are there enough remaining available connections?

Microsoft.network/bastionhosts

Expand table

Executed Checks
- Is the Bastion Host up and running?

Microsoft.network/connections

Expand table

Executed Checks
- Is the VPN tunnel connected? - Are there configuration conflicts in the connection? - Are the pre-shared keys properly configured? - Is the VPN on-premises device reachable? - Are there mismatches in the IPSec/IKE security policy? - Is the S2S VPN connection properly provisioned or in a failed state? - Is the VNET-to-VNET connection properly provisioned or in a failed state?

Microsoft.network/expressroutecircuits

Expand table

Executed Checks
- Is the ExpressRoute circuit healthy?

Microsoft.Network/expressRouteGateways (ExpressRoute Gateways in Virtual WAN)

Expand table

Executed Checks
- Is the ExpressRoute Gateway up and running?

Microsoft.network/frontdoors

Expand table

Executed Checks
- Are Front Door backends responding with errors to health probes? - Are configuration changes delayed?

Microsoft.network/LoadBalancers

Expand table

Executed Checks
- Are the load balancing endpoints available?

Microsoft.network/natGateways

Expand table

Executed Checks
- Are the NAT gateway endpoints available?

Microsoft.network/trafficmanagerprofiles

Expand table

Executed Checks
- Are there any issues impacting the Traffic Manager profile?

Microsoft.Network/virtualHubs

Expand table

Executed Checks
- Is the virtual hub router up and running?

Microsoft.network/virtualNetworkGateways

Expand table

Executed Checks
- Is the VPN gateway reachable from the internet? - Is the VPN Gateway in standby mode? - Is the VPN service running on the gateway?

Microsoft.network/vpnGateways (VPN Gateways in Virtual WAN)

Expand table

Executed Checks
- Is the VPN gateway reachable from the internet? - Is the VPN Gateway in standby mode? - Is the VPN service running on the gateway?

Microsoft.NotificationHubs/namespace

Expand table

Executed Checks
- Can runtime operations like registration, installation, or send be performed on the namespace?

Microsoft.operationalinsights/workspaces

Expand table

Executed Checks
- Are there ingestion delays in the workspace?

Microsoft.PowerBIDedicated/Capacities

Expand table

Executed Checks
- Is the capacity resource up and running? - Are all the workloads up and running?

Microsoft.search/searchServices

Expand table

Executed Checks
- Can diagnostics operations be performed on the cluster?

Microsoft.ServiceBus/namespaces

Expand table

Executed Checks
- Are customers experiencing user generated Service Bus errors? - Are users experiencing an increase in transient errors due to a Service Bus namespace upgrade?

Microsoft.ServiceFabric/clusters

Expand table

Executed Checks
- Is the Service Fabric cluster up and running? - Can the Service Fabric cluster be managed through Azure Resource Manager?

Microsoft.SQL/managedInstances/databases

Expand table

Executed Checks
- Is the database up and running?

Microsoft.SQL/servers/databases

Expand table

Executed Checks
- When there are many logins, have more than a quarter of the login attempts failed for system reasons? - Have more that one login attempt failed for system reasons (in two of the last three minutes)?

Microsoft.Storage/storageAccounts

Expand table

Executed Checks
- Are requests to read data from the Storage account failing due to Azure Storage platform issues? - Are requests to write data to the Storage account failing due to Azure Storage platform issues? - Is the Storage cluster where the Storage account resides unavailable?

Microsoft.StreamAnalytics/streamingjobs

Expand table

Executed Checks
- Are all the hosts where the job is executing up and running? - Was the job unable to start? - Are there ongoing runtime upgrades? - Is the job in an expected state (for example running or stopped by customer)? - Has the job encountered out of memory exceptions? - Are there ongoing scheduled compute updates? - Is the Execution Manager (control plan) available?

Microsoft.web/serverFarms

Expand table

Executed Checks
- Is the host server up and running? - Is Internet Information Services running? - Is the Load balancer running? - Can the App Service Plan be reached from within the datacenter? - Is the storage account hosting the sites content for the serverFarm available?

Microsoft.web/sites

Expand table

Executed Checks
- Is the host server up and running? - Is Internet Information server running? - Is the Load balancer running? - Can the Web App be reached from within the datacenter? - Is the storage account hosting the site content available?

Microsoft.RecoveryServices/vaults

Expand table

Executed Checks
- Are any Backup operations on Backup Items configured in this vault failing due to causes beyond user control? - Are any Restore operations on Backup Items configured in this vault failing due to causes beyond user control?

Microsoft.VoiceServices/communicationsgateway

Expand table

Executed Checks
- Are traffic-carrying instances running? - Can the service handle calls?

Next Steps

- See Introduction to Azure Service Health dashboard and Introduction to Azure Resource Health to understand more about them.
- Frequently asked questions about Azure Resource Health
- Set up alerts so you are notified of health issues. For more information, see Configure Alerts for service health events.
